PROFESSIONAL SUMMARY

Computer Science undergraduate at KL University (CGPA: 8.98/10) with hands-on experience building production-grade, distributed backend systems serving 1,000+ real users. Proficient in Java, JavaScript, Node.js, React.js, MongoDB, and MySQL with a strong foundation in Data Structures & Algorithms (300+ problems solved). Passionate about scalable system design, offline-first architectures, and writing clean, maintainable code. Seeking a Software Engineering Internship to contribute to high-impact engineering teams at scale.

EDUCATION

KL University

B.Tech in Computer Science & Engineering **CGPA: 8.98 / 10.0**

Aug 2023 – May 2027
Guntur, Andhra Pradesh, India

Shri Shivaji Junior College

Intermediate – Physics, Chemistry, Mathematics **75.57%**

Jun 2021 – May 2023
Parbhani, Maharashtra, India

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), C, SQL

Frameworks & Libraries: Node.js, Express.js, React.js, Next.js, Dexie.js

Databases: MongoDB (aggregation pipelines, indexing, schema design), MySQL (query optimization, joins, transactions)

Cloud & DevOps: AWS (EC2, S3), Microsoft Azure, Git, GitHub, CI/CD Pipelines, Vercel, Linux CLI

APIs & Tools: RESTful API Design, Webhook Integration, Postman, Telegram Bot API, WhatsApp Cloud API, Nodemailer

CS Fundamentals: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, OOP, System Design

Concepts: Distributed Systems, Offline-First Architecture, Eventual Consistency, Caching, Rate Limiting, Idempotency

PROJECTS

KL-Eats – University Food Ordering Platform |

Node.js, Express.js, MongoDB, Telegram Bot API, REST APIs

- Architected a concurrent-safe order processing backend handling **500+ daily transactions** with zero data-loss guarantees using atomic MongoDB operations and optimistic concurrency control
- Engineered scalable REST APIs with Express.js serving a **1,000+ user** base; implemented input validation, error handling middleware, and structured logging for production reliability
- Reduced average API response time by **30%** through targeted MongoDB index optimization, query restructuring, and elimination of N+1 query patterns
- Built an event-driven real-time admin notification pipeline using Telegram Bot API, cutting average order acknowledgment time from minutes to **under 10 seconds**
- Implemented role-based access control (RBAC) and JWT-based authentication to secure multi-role user flows (customer, vendor, admin)

Tastoria – Offline-First Point of Sale (POS) System |

tastoria-front-liard.vercel.app Node.js, React.js, MongoDB, IndexedDB, Dexie.js, WhatsApp Cloud API

- Designed an offline-first distributed POS system using IndexedDB (Dexie.js); system remains **fully functional with zero connectivity** and syncs automatically upon reconnection
- Built a custom sync engine implementing **eventual consistency** between local client state and MongoDB, handling concurrent writes through conflict resolution and timestamp-based merge strategies
- Engineered retry queues and idempotent API endpoints to guarantee **exactly-once order processing** during intermittent network failures – a core distributed systems challenge
- Reduced end-to-end system latency by **40%** via React memoization, optimized re-render cycles, and database-level write batching
- Integrated WhatsApp Cloud API for automated order confirmation and status update workflows, improving customer communication efficiency

Smart India Hackathon – Student Portal & Attendance System |

Node.js, React.js, MySQL, JWT, REST APIs

- Built a full-stack student management platform supporting **500+ concurrent users**; designed relational MySQL schema with normalized tables, optimized joins, and indexed queries under load
- Implemented stateless JWT authentication with RBAC supporting three distinct user roles (student, faculty, admin) with fine-grained permission enforcement at the API layer
- Delivered a fully tested REST API suite with documented endpoints (Postman collections), enabling rapid frontend integration and future extensibility

CERTIFICATIONS

• **Microsoft Certified: Azure Fundamentals (AZ-900)** – Certiport / Pearson VUE

Verify

• **MongoDB Associate Developer** – MongoDB University

Verify

ACHIEVEMENTS & LEADERSHIP

- Solved **300+ DSA problems** across LeetCode, CodeChef, and Codeforces covering arrays, trees, graphs, DP, and sliding window
- Built and deployed **two production-grade systems** actively used by 1,000+ real users at KL University
- Maintains **40+ public GitHub repositories** spanning full-stack, backend systems, and algorithmic problem-solving
- Led cross-functional developer teams in national-level hackathons, driving end-to-end delivery from design to deployment
